

Sewer Pump Station #27

Thanks for your support!

We want to thank each and everyone of you for your support during the construction of the Pump Station # 27 project.

We would like to solicit your input and feedback to improve the Pump Station #27 project and look forward to your comments.

If you have any thoughts you would like to share about any aspects of the project, please feel free to contact any of the following project team members:

**Pump Station #27
Summer Moratorium
May 28 thru Sep. 19**
Orion Construction and the City of San Diego have adjusted the construction schedule to eliminate

construction during the Moratorium.

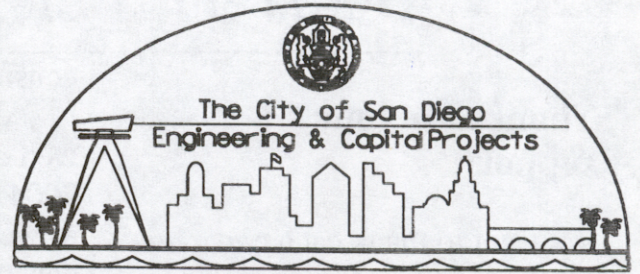

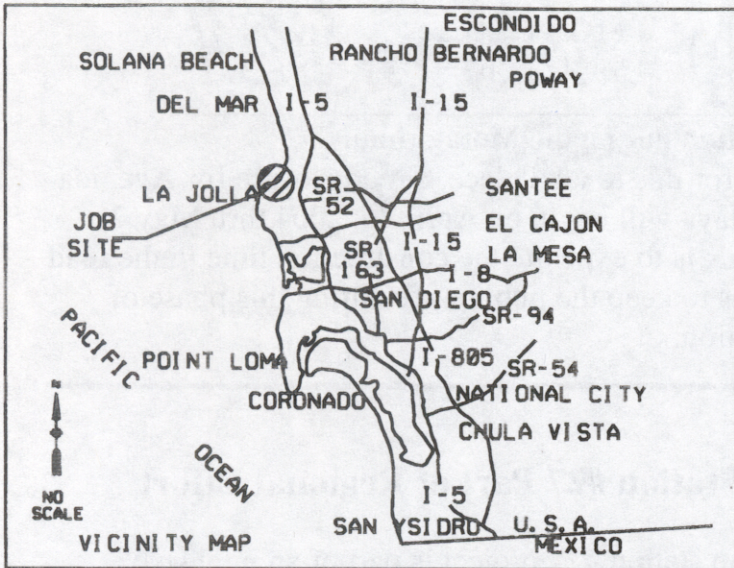

In order for this to take place, a road closure for Avenida De La Playa will begin on April 26, 2004 thru May 7, 2004. This is to expedite the construction time in the road as well as to keep the public safe during this phase of construction.

Pump Station #27 Part of Regional Effort

The pump station #27 project is part of an intensive regional effort by the Metropolitan Wastewater Department to eliminate sewer overflows in San Diego.

To do this, Pump Station #27 has included many redundant systems and a radio operated monitoring and control system. The radio monitoring system will allow staff to monitor and control the operation of all City pump stations from a central location 24 hours a day.
